

## PREVENTATIVE MAINTENANCE

**Preventative maintenance is required every 3 months by a qualified service technician:**

Check temperatures

Check drain for damage

Check and clean the condensate tray

Check and clean the condensate drain lines

Check condenser fan motors

Check adequate airflow to compressor

Check evaporator fan motors

Clean condenser with compressed air

Check and clean air grilles

Check LED lighting and diffusers

---

For cabinets with front or rear sliding/swing doors

Check door seals for damage

Check door seals for adequate sealing

---

**Once the preventative maintenance has been undertaken, update the cabinet servicing record.**
